

Dual-view Swin-FPN CenterPoint radar detector

Exact model instantiated by train.py with the current train_cfg.py

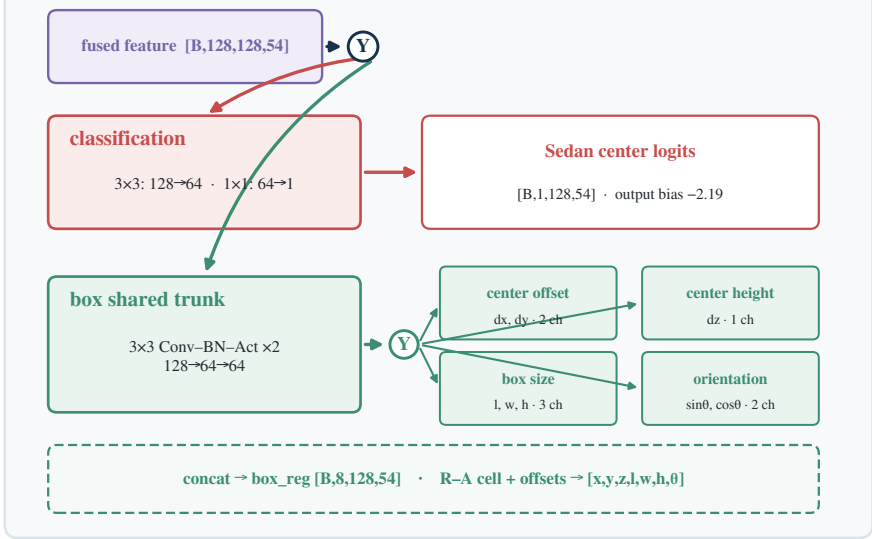

A | Executed end-to-end graph

B | Inside one Swin-FPN encoder (instantiated twice; weights are not shared)

C | Dense CenterPoint decoder and Cartesian output

TRAINING OBJECTIVE (not a model layer)

Gaussian-focal center heatmap + Smooth-L1 offset / height / size / yaw + 2.0 × GWD · heatmap radius = 3

WHAT IS NOT IN THIS ACTIVE GRAPH

No CBAM · no deformable convolution · no object-query Transformer · no absolute positional embedding
