

Dual-view Swin-FPN CenterPoint radar detector

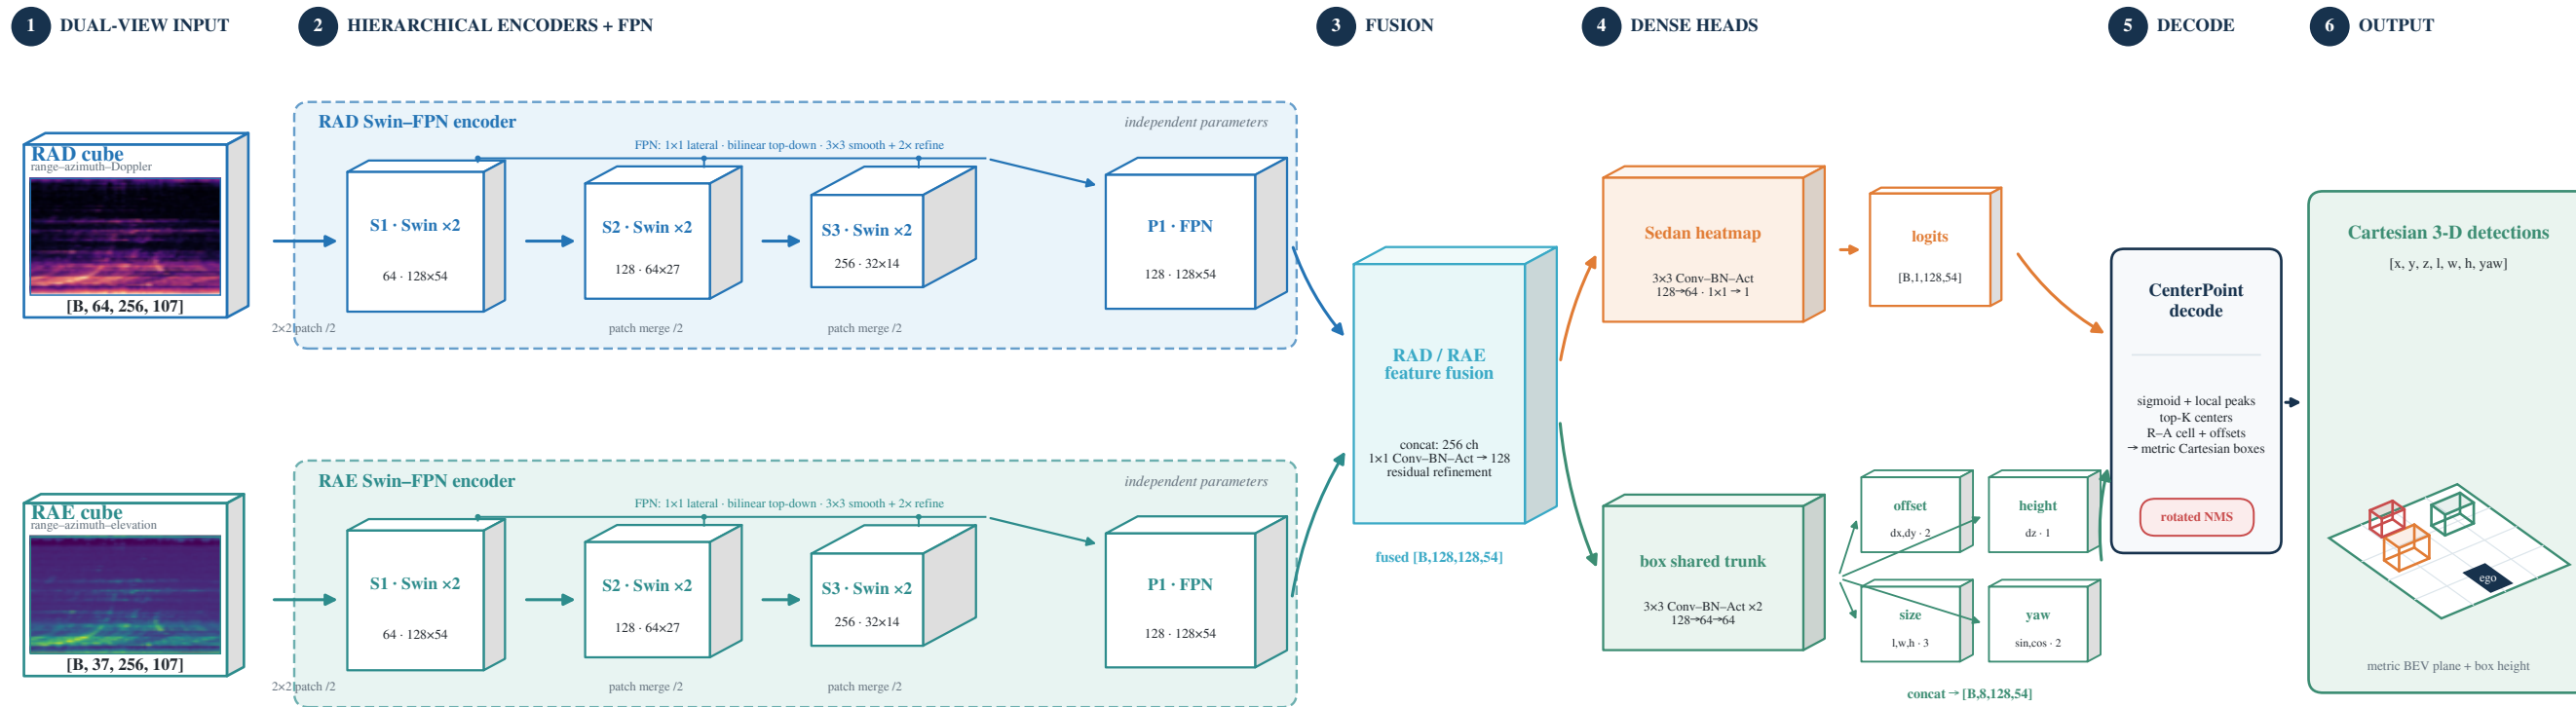

Implemented graph selected by train.py / train_cfg.py · exact tensor shapes · independent RAD and RAE encoders

model7

Cartesian

CenterPoint

Sedan

2.5-D drawing convention

front face = spatial feature map

depth = channels · perspective is illustrative · no 3-D convolution

Implemented-model notes

The two Swin-FPN modules do not share weights. Dense prediction is evaluated at stride 2 (128×54).

This active graph contains no object-query Transformer decoder; the separate concept figure shows that possible redesign.
