

Overall RADE dual-view processing and detection

CURRENT MODEL7

Four-axis radar tensor → three-view RAD and RAE cubes → independent encoders → encoded-feature fusion → shared detector

Real paired data: K-Radar 5/00240 · paired random selection, seed 42 · linear-power mean projections. Every visible cube surface uses the same colormap and display-normalization rule.

RAD surfaces: RA front · RD side · AD top. RAE surfaces: RA front · RE side · AE top. Four-axis glyph adapted from 4DR P2T Fig. 2; artwork is original.
